

Name: _____

Date: _____

Hemodynamics

Across

- 2. The force of the ventricular contraction
- 6. resistance to blood flow in the intravascular space
- 7. Beta 1 adrenergic agonist
- 9. The stretch and volume in the ventricle before it contracts
- 10. Anti-fibrinolytic
- 11. The pressure the ventricles work against to eject blood

Down

- 1. The amount of blood ejected with each contraction
- 3. Phosphodiesterase 3 inhibitor
- 4. Heparin reversal agent
- 5. An electrolyte rich solution to stop the heart
- 8. Increases heart rate and contractility
