# Homework Puzzle

## Across

- 2. fossil that forms when minerals soak into buried remains, replacing them, and changing them into rock
- 5. the kind of organisms that do not fossilize
- 7. fossil that forms when a mold is filled with sand/mud that hardens into the shape of the organism
- 8. Fossil that preserves the footprints of animals and show where they might have lived millions of years ago
- 9. fossil that forms when sediments bury an organism and change into rock

- 10. fossil that forms when plants/animals are pressed between soft mud or clay, leaving an imprint on the rock

## Down

- 1. the type of rock that you would most likely find fossils
- 3. fossil that forms when an entire organism are prevented from decaying
- 4. traces/preserved remains of organisms that lived in the past
- 6. the reason why many marine speices are fossilized
