

How Does The Eye Work?

Across

- 4. This is the muscle that controls the pupil
- 6. Part of the eye that gathers light
- 10. The change of energy into neurological impulse
- 12. Where the retina has no rods or cones
- 13. Center of the retina where most rods and cones are located

Down

- 1. if you have short lens you are...
- 2. White part of your eye
- 3. If you have long lens you are...
- 5. A bundle of neurons that carries visual information from retina to the brain

- 7. The thin coating on the back of the eye and has photoreceptors
- 8. Point where optic nerve exits the eye and where there are no photo receptors
- 9. Identifies color (day vision)
- 11. Light sensitive (night vision)
