

Name: _____

Human Evolution

Across

2. The transitional species between H. Habilis and H. Erectus

5. More sophisticated, finely worked scrapers, spear tips, and axe heads. Edges re-shaped and attached to other materials. Required skill to make and techniques taught and learned

7. As a result of the increase of cranium space, we were able to develop complex thinking such as...

12. Lucy

15. Tools that were first discovered and used by H. Habilis

17. Theory that suggests populations evolved rather isolated, with some interbreeding, evolving in parallel to each other.

18. Kills bacteria, parasites, plant toxins, and makes digestion easier

Down

1. First Hominid to have the ability to control and manipulate fire

3. The Multiregional theory suggests that H. Sapiens evolved directly from this Hominid, whereas Out of Africa theory does not

4. Hominids survived selection pressures and used/uses upper paleolithic tools

6. Creating a relationship between man and animal which benefitted both

8. More complex tools made of various materials such as antlers, wood and bones

9. Jack of all trades

10. First animal to be domesticated

11. Theory that suggests that modern humans evolved from African populations, which left Africa ~200,000 y/o. Replacing regional populations of H. Erectus

13. Tear drop shaped tools used by H. Erectus

14. Tribe (below subfamily) that included humans and bipedal fossils like Australopithecus and paranthropus. also called hominid

16. Family that includes apes and humans
