

Human Impact On The Environment: Oil Spills

Across

5. Created when the petroleum formed from dead organisms piling on top of each other in the ground over millions of years is heated

11. Irregularity that comes in the sequence of consumption due to the presence of oil

12. Name of the oil spill that took place in the Gulf of Mexico close to Louisiana due to an oil rig explosion

13. Dangers created on beaches and in coastal areas caused by the spread of oil onto land from the ocean

Down

1. Place that is far from the spill sight to avoid a person physically touching the oil, but still receives exposure through the movement of the oil contaminants

2. Region where the most oil spills take place in America

3. Chemicals found in oil that are released into resources (air, water, food, etc.) that pose health problems for exposed living organisms

4. Name of the oil spill that took place in a Southern California channel due to insufficient safety measures

6. Name of the oil spill that took place in the Gulf of Alaska due to a tanker ship and cold-water reef collision

7. Human caused disaster that releases oil into the environment

8. Specific areas of water that organisms travel to by means of releasing their individual egg and sperm for reproduction

9. Harm caused by spills that results in the coating of living organisms entirely and destroys their necessities to live

10. Place that is close enough to the sight of the spill that a person's contact with the oil is possible
