

Name: _____

Date: _____

Hurricanes

Across

- 5.** An intense low-pressure wind that forms over oceans with high winds of hurricane force.
- 6.** The calm, center part at the center of a hurricane.
- 7.** When the pressure in the atmosphere is below average.
- 10.** A rainband is a cloud and precipitation structure associated with an area of rainfall which is significantly longer in width.
- 11.** Classifies hurricanes and puts them into five different categories.

Down

- 1.** The area immediately outside the eye of a hurricane, has heavy rainfall, tall clouds, and high winds.
- 2.** A tropical storm with violent winds.
- 3.** A rise in sea level that occurs during a tropical storm.
- 4.** When the pressure in the atmosphere is above average.
- 8.** The movement of air, usually in a particular direction.
- 9.** The solid or almost solid part of rain in a hurricane that becomes heavier once it gets closer to the eye.
