ICT CROSSWORD PUZZLE

Across

1. is a mobile device, typically with a mobile operating system and touchscreen display processing circuitry, and a rechargeable battery in a single, thin and flat package.

6. a computer network that links devices within a building or group of adjacent buildings.

9. a small computer that contains a microprocessor as its central processor.

11. a method employing encryption to provide secure access to a remote computer over the internet.

16. processes commands to a computer program in the form of lines of text.

19. is computer hardware which is used to enter data for processing. Some examples of it are devices include keyboard, mouse, image scanner, digital cameras and joysticks.

21. a circuit board that can be inserted in a computer to give extra facilities or memory.

23. a collection of instructions that tell a computer how to work.

24. a high-capacity, self-contained storage device containing a read-write mechanism plus one or more hard disks, inside a sealed unit.

25. facts and statistics collected together for reference or analysis.

26. an auxiliary device used to put information into and get information out of a computer.

27. a person who utilizes a computer or network service which often has an account and is identified to the system by a username.

28. a particularly powerful mainframe computer.

29. is a computer's short-term memory, which it uses to handle all active tasks and apps.

30. the part of a computer that houses the primary devices that perform operations and produce results for complex calculations.

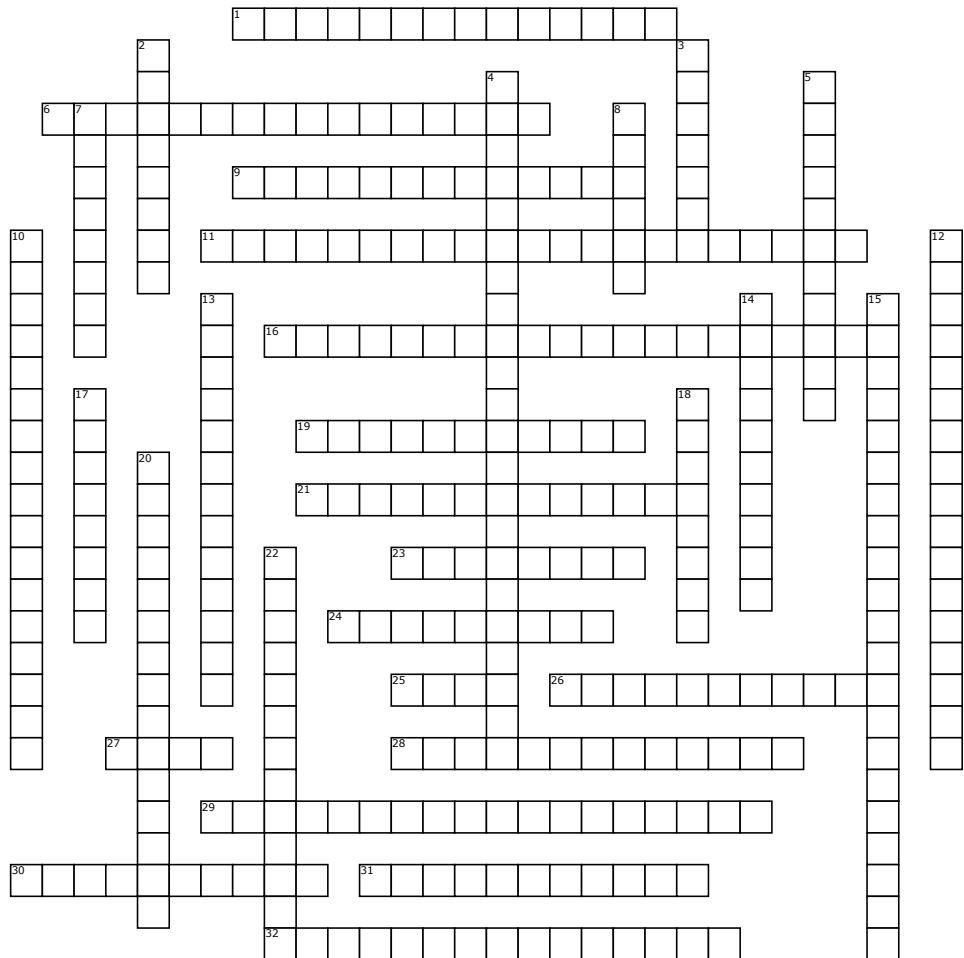

31. an electrical device that supplies electric power to an electrical load.

32. the physical and logical relationship of nodes in a network, the schematic arrangement of the links and nodes, or some hybrid combination thereof.

Down

2. a substance or device that absorbs or dissipates especially unwanted heat (as from a process or an electronic device)

3. a technology consisting of computer components and recording media that are used to retain digital data.

4. a visual way of interacting with a computer using items such as windows, icons, and menus, used by most modern operating systems.

5. a printed circuit board containing the principal components of a computer or other device, with connectors into which other circuit boards can be slotted.

7. is a conceptual framework used to describe the functions of a networking system.

8. is a piece of computer hardware or software that provides functionality for other programs or devices, called "clients".

10. high-performance computers with large amounts of memory and processors that process billions of simple calculations and transactions in real time.

12. a piece of technology that is used either to temporarily or permanently hold information in a structured fashion.

13. a small computer that contains a microprocessor as its central processor.

14. describes software manipulating or extracting data from a stored file.

15. the part of a computer in which operations are controlled and executed.

17. an electronic device for storing and processing data, typically in binary form, according to instructions given to it in a variable program.

18. is the physical components that a computer system requires to function.

20. the software that supports a computer's basic functions, such as scheduling tasks, executing applications, and controlling peripherals.

22. processes commands to a computer program in the form of lines of text.
