# Inside the Earth - Layers

## Across

- 4. the section of the mantle that flows like asphalt
- 7. the motion in which hot rises and cold sinks
- 9. lithosphere that is thick, old and less dense
- 10. the crust plus the top part of the mantle

## Down

- 1. waves generated by an earthquake that have helped map the Earth's interior
- 2. hot but solid, mostly iron layer
- 3. largest layer which is crystalline but largely plastic
- 5. the outermost layer which is rocky and brittle
- 6. hot, liquid mostly iron
- 8. lithosphere that is thin, young and dense
