James Geometry

Across

- 2.** is part of a line segment
4. a measurable parts of a line that consists of two points called endpoints
5. points that lie on the same line
8. a location and basic undefined term for geometry
9. is a flat surface made up of points that has no depth and extends indefinitely
11. points that lie on the same plane

12. made up points and has no thickness or width

- 13.** is equidistant from the side angle when measured along a segment perpendicular to the side of the angle
14. to cut or divide into two equal parts
15. a point where two or more curves, lines, and edges meet

Down

- 1.** a line that divides a line segment into two equal parts and makes a right angle with the line segment
3. a line segment is the point on the line segment that divides the segment into two segments
6. is part of a line and it has one endpoint and extends indefinitely
7. formed by two parts in a plane
10. a point at which a line segment or ray ends
