

Land Biomes by Bobby Stephenson

Across

3. A region of Earth where the climate determines the types of plants that live there
 8. Biome that have grasses and few trees
 12. Broad-leaf trees that drop their leaves as winter approaches
 14. Rain Forest near the equator and is warm throughout the year
 16. Forest that has a long, cool wet season then a dry summer

Down

1. Grassland that has high average temperatures throughout the year
 2. Forest that has moderate precipitation, hot summers, and cold winters
 4. Features that allow organisms to survive and reproduce
 5. Trees that have evergreen, needlelike leaves
 6. This place has low average temperatures and very little precipitation

7. Smaller areas inside a biome

9. Nonliving

10. A very dry biome

11. Grassland that has hot summers and cold winters

13. The main abiotic factor that characterizes a biome

15. This place has low average temperatures but more precipitation
