

# Landforms

## **Across**

- 2.** a large underground chamber formed when rainwater follows the cracks in a rock and begins to dissolve the rock.
- 4.** a type of valley formed by running water with steep straight sides.
- 6.** process of wind, water, and other factors breaking down rocks into soil and tiny pieces
- 7.** a physical feature of the earth's surface
- 10.** large body of year-round ice & snow that moves slowly across the land and deposits sediment where it melts

**12.** landform in which the earth's surface rises usually higher than 1,000 ft

**13.** a mountain or hill, typically conical, having a crater or vent through which lava, rock fragments, hot vapor, and gas are being or have been erupted from the earth's crust.

**14.** process of wearing away or moving soil and rock by water, wind, and ice

## **Down**

**1.** A hill of sand, made and shaped by wind

**3.** a type of valley formed by a glacier with steep sides and a rounded bottom.

**5.** process of dropping sediment in another location

**8.** A landform made of sediment that is deposited where a river flows into an ocean or lake

**9.** deep and narrow valley surrounded by steep cliffs.

**11.** a large natural stream that flows into a larger body of water
