Life science classification

Across

- **3.** maintaining a internal environment
- **5.** consumes other organisms to get energy
- **7.** eukaryotic, multicellular, sexual and asexual and heterotrophic
- 8. no nucleus
- **11.** life comes from ather living things
- **12.** a classification system that gives each species a 2 part latin name

- **14.** prokaryotic, unicellular, sexual and asexual and autotrophic
- **15.** Eukaryotic, multcelled, asexual and sexual and autotrophic
- **17.** the organism produces its own food
- 18. a living thing

Down

- 1. life comes from nonliving matter
- **2.** only needs one parent to reproduce

- **4.** requires 2 parents for reproduction
- 6. nucleus in cells
- **9.** Eukaryotic, multicelled, sexual reproduction and heterotrophic
- **10.** eukaryotic, unicellular, asexual and sexual and autotrophic and heterotrophic
- 13. smallest unit of life
- **16.** prokaryotic, unicellular, asexual and sexual, autotrophic and heterotrophic
