MCR crossword

Across

- 2. triangle with two consecutive
- **4.** a closed figure formed by a finite number of coplanar segments so that each segment intersects exactaly two others, but only at their endpoints
- **8.** has two pairs of consecutive congruent sides, but opposite sides are not conguent
- 13. most repeated numbers
- **14.** a line that intersects two or more lines in a plane at different points
- **15.** a point that divides a segment into two congruent segment
- 16. smaller than 90 degree angle
- 17. usually measured in degrees

- **18.** part of a line that consist of two points called the endpoints and all points between them
- 19. larger than 90 degrees angle
- **22.** a pair of angles that share a vertex but nothing else
- 23. often refered to as the average
- 24. segment with equal lengths
- **25.** the two smaller angles equal the bigger angle

Down

- **1.** the middle of an arrangment of numbers
- **3.** a ray in the interior of an angle that splits the angle into two congruent angles

- **5.** a pair of angles whos sum is 180 degrees
- **6.** a pair of angles who sum in 90 degrees
- 7. points that lay on the same line
- **9.** an angle whos vertex is at the cebter of the circle
- 10. distance around the circle
- 11. 90 degrees angle
- **12.** a pair of angles with a shared vertex and common side but do not have overlapping interiors
- **20.** a quadrilateral with only one pair of parallel sides
- **21.** a figure formed by two rays with a common endpoint, called a vertex
