

MEDSCI201 Lab 2 Medial & Lateral Surface of the Knee

Across

5. An extension of the synovial joint space
6. Inserts on the anterior side of the lateral femoral condyle of bovine knee & extends inferiorly
7. Insertion of the bicep femoris muscle in the human knee
8. Insertion of the bicep femoris muscle in the bovine knee
9. Provides strength and is mostly found on the outside of the meniscus

10. Originates from the lateral side of the lateral femoral condyle and inserts on the medial side of the tibia

11. Found between the femur and tibia

Down

1. Action that occurs as a result of the popliteus muscle on the femur during muscle contraction
2. Main knee extensors of the knee
3. Smaller ligament found near the lateral collateral ligament that helps with stability of the patella during movement of the knee
4. Ligament that the medial meniscus is attached to in humans but not in the bovine knee
