

MS ACCESS

Across

5. A computer application, such as Microsoft Access, that is used to store data and convert it into useful information

7. The field that makes each record in a table unique

8. A field in one table that also is stored in a different table as a primary key

10. A complete set of all of the data about one person, place, event, or idea

Down

1. A collection of records

2. A file that consists of one or more tables and the supporting objects used to get data into and out of the fields

3. A basic entity, data element, or category, such as a book title or telephone number

4. The data field that you assign to group data vertically into columns

6. Displays the infrastructure of a table, form, or report without displaying the data

9. The source field that you assign to group data horizontally in a crosstab query
