

Name: _____ Date: _____ Period: _____

Managing Information and Change in a Connected World

- | | |
|--|---------------------------------|
| 1. A personal computer system designed to fit on the top of a desk. | A. hard disk drive |
| 2. a component of the ALU that temporarily holds instructions and data | B. executing time |
| 3. a technology consisting of computer components and recording media that are used to retain digital data. | C. storage register |
| 4. special areas of main memory used to store program instructions being executed and data being processed. | D. executing |
| 5. fastest, most powerful, and most expensive type of computer designed for multiple users. | E. instruction register |
| 6. A reserved location in main memory for strong data being processed or being used in a specific processing application. | F. information processing cycle |
| 7. The activity of translating or determining the meaning of coded instructions. | G. terabyte |
| 8. A personal computer system designed to fit on the top of a desk. | H. Decoding |
| 9. The CPU process of performing an operation specified in a program instruction. | I. register |
| 10. The time required for an operation specific/logic unit to decode and execute an instruction. | J. Desktop computer |
| 11. the CPU process of retrieving instructions or data from memory for execution. | K. terminal |
| 12. A secondary storage device capable of recording information to, and reading information from, a small disk placed inside the device. | L. supercomputer |
| 13. Unit of memory equal to 1,073,741,824 bytes. | M. virtual age |
| 14. a unit of memory measurement equal to approximately 1trillion dollars. | N. Data register |
| 15. an input/output device, consisting of a keyboard and monitor, typically used with multi- user computer systems. | O. handheld computer |
| 16. a term applied to the present era in which computers and their ability to stimulate reality are the dominate economic force. | P. fetching |

- | | |
|--|----------------------|
| 17. a personal computer small enough to fit into a person's hand. | Q. storage |
| 18. A device for reading and writing to the magnetic storage medium known as a hard disk | R. Desktop computer |
| 19. a memory location (register) where instructions being used for processing are stored. | S. gigabyte |
| 20. A cycle during which information is entered, processed, outputted, and/or stored by a computer | T. floppy disk drive |
