Name: _____ Date: _____

Math

Across

4. A triangle having three unequal sides and angles

6. A triangle with all sides equal and all angles equal

9. A continuous extent of length

12. A 90 degree angle

16. A rectangle having all four sides of equal length

17. A triangle with one internal angle equal to 90 degrees

19. A polygon with 5 sides and 5 angles

20. A parallelogram having four right angles

Down

1. An angle less than 90 degrees but greater than 0 degrees

2. Line segments that do not intersect

3. Two line segments which cross to form 90 degree angles

5. The part of a straight line considered as originating at a point on the line and as extending in one direction from that point

7. A curve that is continuous and had endpoints that meet at the same point

8. The intersection point of two sides of a plane figure

10. One part of as line

11. A triangle which has two sides equal

13. The segment between two points on a given curve

14. A position in space

15. A polygon having eight angles and eight sides

18. An equilateral parallelogram having oblique angles
