

Name: _____

Date: _____

Math Crossword

Across

4. an angle with a degree measure of 90
 5. an angle with a measure less than 90
 8. lines that form right angles
 10. a location
 11. is a flat surface made up of points that has no depth and extends indefinitely in all directions.
 13. points that lie on the same line
 14. not on the angle nor in the interior of the angle
 17. having the same measure

18. an angle with degree measure greater than 90 and less than 180

19. the point halfway between the endpoints of a segment

20. two angles with measures that have a sum of 90

21. points that lie in the same plane

Down

1. closed figure whose sides are all segments

2. made up of points and has no thickness or width

3. a pair of adjacent angles whose noncommon sides are opposite rays

6. the sum of the lengths of the sides of a polygon

7. a measurable part of a line that consists of two points, called endpoints, and all the endpoints between them

9. two angles with measures that have a sum of 180

12. it does not lie on the angle itself and it lies on a segment with endpoints that are on the sides of the angle

15. a ray that divides an angle into two congruent angles

16. intersection of two noncollinear rays at a common endpoint
