

Math Terms Part 1.

Across

- 1. An angle that measures more than 90 degrees, but less than 180 degrees
- 6. A graph where the points are everywhere
- 7. Two angles next to each other
- 8. A number with only two factors
- 9. A value that is greater or less than the other points
- 11. $f(x)$
- 16. A set of numbers (0, 1, 2, 3)
- 17. When there is no relationship between data sets
- 19. When you use $<$, $>$, and $=$
- 21. Two times a number
- 23. An angle that measures less than 90 degrees
- 25. A number times itself
- 26. The middle number of a set of numbers

- 28. To make a fraction simple, dividing

- 32. Symbols for numbers
- 33. The number to be multiplied
- 37. $an=a1 + (n-1) d$
- 38. A small raised number
- 39. A letter that stands in for a missing number
- 40. No fractions or decimals

Down

- 2. A number that divides evenly into another number
- 3. The answer to a multiplication problem
- 4. A number that has a smaller value than the other
- 5. Lines that are straight and will never intercept
- 10. Lines that intercept
- 12. Each number is laid out

- 13. A set of number (x,y)

- 14. A point and other points between them
- 15. A number that has a greater value than the other
- 18. The substitute value in a function
- 20. A set of ordered pairs
- 22. The position of a digit in a number
- 24. The answer to a subtraction problem
- 27. When two numbers have the same value
- 29. Continues in both directions, no stopping point
- 30. The answer to a division problem
- 31. An angle that measures 90 degrees
- 34. The point at which the x and y axis intercept
- 35. A number that has a digit in the tenths place...
- 36. The end point of a ray

Word Bank
