## Math Vocab

## Across

1. A system of equations that has no solution.
2. A relationship or expression, involving one or more variables
3. a number that describes both the direction and the steepness of the line.
4. The set of values of the independent variable(s) for which a function or relation is defined
5. The difference between the lowest and highest values.
6. The result of a dividing problem.
7. The result of a subtraction problem.
8. symbol used to compare two numbers, with the greater number given first.
9. a linear or nonlinear system of equations where at least one set of values satisfies every equation.
10. an algebraic equation, such as $y=$ $4 x+3$, in which the variables are of the first degree

## Down

2. a collection of two or more equations with a same set of unknowns.
3. An inequality is like an equation that uses symbols for "less than"(<) and "greater than"(>) where an equation uses a symbol for "is equal to" ( $=$ ).
4. symbol used to compare two numbers, with the lesser number given first.
5. variable represents a quantity whose value depends on those manipulations.
6. Where the line crosses the $x$ axis on a chart.
7. the total amount resulting from the addition of two or more numbers, amounts, or items.
8. relating to the multiplicative inverse of a quantity or function.
9. where the line crosses the $y$-axis on a chart.
10. a variable that represents a quantity that is being manipulated in an experiment.
