

Math Vocab Words

Across

- 1. Data that is observed and not measured
- 4. An equation with two or more inequalities joined together with either "and" or "or"
- 8. The first thing you should do when given a term like $2(3x+6)=6x+12$
- 11. The average of a data set
- 12. The amount of space inside an object
- 15. The difference between quartile one and quartile three
- 17. Lines that never touch or intersect
- 18. The difference between the actual value on a scatter plot and the predicted value
- 19. A graph that groups numbers into ranges

- 20. Measures the relationship between any two variables
 - 21. The average of the squared differences from the mean
 - 22. A standardized way of writing real numbers
 - 23. A table meant to display bivariate data
 - 24. When a variable influences another
- Down**
- 2. Data that is measured
 - 3. A phrase to help remember the order of operations
 - 5. A theory that states in a right triangle, the square length of the hypotenuse is equal to the sum of the squares of the lengths of the other two sides
 - 6. The result of subtracting numbers

- 7. Two lines that intersect at right angles
- 9. On a graph it's a straight line
- 10. A step needed in dividing fractions
- 13. The result when adding two or more numbers together
- 14. A table pertaining to percents and decimals
- 16. A measure used to quantify the amount of variation or dispersion of a set of data values
