# Math Vocabulary

## Across

- 2. calculating the total of two or more numbers
- 3. a term used to indicate the distance of a point or number from the origin
- 11. a mathematical object used to count, measure, and label
- 12. a statement of how two numbers compare
- 14. the horizontal line on a coordinate plane
- 15. a numerical quantity that is not a whole number
- 17. the corner point of a polygon

18. of lines, planes, surfaces or objects) side by side and having the same distance continuously between them

- 19. one side of a polygon
- 20. take away a number or amount to calculate the difference

## Down

- 1. point where two or more lines meet
- 4. a number that can be divided, without a remainder, by 1 and itself.
- 5. points on a coordinate plane) the value of x and y on a coordinate plane

6. numbers you multiply together

- 7. math property where the order of the numbers does not change the answer
- 8. splitting into equal parts or groups
- 9. any number less than zero on the left side of the number line
- 10. any number greater than zero on the right side of the number line
- 13. the verticle line on a coordinate plane
- 16. part of math in which leters and symbols represent numbers
