

Math Vocabulary

Across

- 4.** A four-sided polygon.
6. angles are two lines that intersect.
9. All the space that's touchable on the surface of an object.
11. This equation is in $f(x) = a(x-h)^2 + k$ form.
12. Of a regular polygon is the distance from the center to each vertex.
14. Space inside an object

15. A trigonometric function that is equal to the hypotenuse and the adjacent of a right triangle.

16. There are two events if the second event doesn't change the PROBABILITY of the first event occurring it is called.

Down

- 1.** A trapezoid with two RIGHT angles.
2. angles are two angles that have a sum of 90.

3. angles are two angles that adds up to one 180.

5. The line that divides something into two equal lines.

7. rule is used to verify and answer when dealing with probability.

8. //

10. This equation in $y = (x-7)^2 - 4$ form.

13. A line that intersects a circle at two points.
