

# Math Vocabulary

## Across

3. a triangle with 2 sides that are equal but 1 that is a different length  
 6. an angle that is less than 90 degrees  
 7. an equation that forms a line  
 8. 2 angles that add up to 180 degrees  
 15. the length of the distance between two opposite points on the circumference  
 18. the length of the middle of the circle to a point on the circumference  
 20. the answer to a division problem  
 21. a curve, not a line  
 23. the perimeter of a circle  
 24. the comparison between two fractions  
 25. a triangle that has all sides with equal lengths

29. the likelihood or chance that something will happen

30. a fraction equals a fraction

## Down

1. a triangle with all sides that are different lengths  
 2. the answer to a multiplication problem  
 4. the top number of a fraction, the one that indicates how many parts of the whole you have  
 5. 2 angles that add up to 90 degrees  
 9. the answer to a subtraction problem  
 10. the outside edge of a figure  
 11. 2 lines that stay the same distance from each other and will never intersect  
 12. how much you have out of 100  
 13. an angle that is exactly 90 degrees

14. the space inside of a 3-D figure  
 16. the space inside of 2-D figure  
 17. the horizontal axis on the graph  
 19. the answer to an addition problem  
 22. the bottom number of a fraction, the one that indicates how many parts there are in total  
 26. the vertical axis on the graph  
 27. the zero on a graph  
 28. an angle that is more than 90 degrees
