# Math project.

**Across**

**2.** A point or other segment that intersects a segment at its midpoint.

**5.** A point where other lines meet and cross each other.

**7.** part of a line that is bounded by two distinct end points, and contains every point on the line between its endpoints.

**8.** Two coplanar angles with a common side

**11.** Indicates a location and has no size.

**13.** A pair of adjacent angles whose noncommon sides are opposite rays.

**14.** Two angles whose sides are opposite rays.

**15.** An accepted rule or fact.

**16.** The angles are the same. They have the same measure.

**Down**

**1.** Two angles that have a sum of 90 degrees.

**3.** Two angles that have a sum of 180 degrees.

**4.** Points that lie on the same line

**6.** Segment is a point that divides the segment into two congruent segments.

**9.** A ray that divides an angle into two congruent angles.

**10.** Formed by two rays with the same endpoint.

**12.** The endpoint of an angle
