

Mathematical Memories

Across

1. An _____ is a statement that indicates that the value of two mathematical expressions are equal
2. the formula of volume for a _____ is $V=Bh$.
5. Parallel, Intersecting, and Coincident are all examples of a _____.
10. The _____ of a figure is measured in square units.
13. The "Steepness" of a line is otherwise known as its _____.
15. The name of a figure that has not been transformed is known as a _____.
16. 6:4, 6 to 4, and $6/4$ are all examples of a _____.
17. This means a "total" value.

18. If geometric figures are the same then, they are _____.

19. A _____ is a relationship where each input contains a single output

20. The sum of _____ are 180° .

21. The following is a set of rational and irrational numbers.

Down

3. The measurement of a right angle is exactly _____ degrees.

4. $\sqrt{9}=3$ and $\sqrt{25}=5$ are examples of _____.

6. A transformation that allows you to slide a geometric figure vertically, horizontally, but not diagonally.

7. A quantity that represents a "Power" is known as an _____.

8. "No Solution"; Lines which do not meet.

9. When looking in a mirror, the image you see is an example of a _____.

11. A "chart" that gives a schematic representation of data.

12. _____ is used to measure Three-Dimensional figures and is expressed in cubic units

14. A transformation that allows you to change the shape or size of a geometric figure.
