# Medical Terminology 2.01

## Across

3. Is a heart rate that exceeds the normal resting rate.

4. Measures the electrical activity of muscles at rest and during contraction.

8. A reduction in the number of white cells in the blood, typical of various diseases.

10. A red blood cell that (in humans) is typically a biconcave disc without a nucleus.

11. Another term for platelet.

12. A disorder in which blood doesn't clot normally.

13. Term used to describe intense and usually widespread reddening of the skin due to inflammatory skin disease.

14. The surgical opening or puncture of a vein in order to withdraw blood or introduce a fluid, or (historically) as part of the procedure of letting blood.

15. The branch of medicine that deals with diseases and abnormalities of the heart.

## Down

1. A technique using X-rays to diagnose and locate tumors of the breasts.

2. The thickening and hardening of the walls of the arteries, occurring typically in old age.

5. The cells of the immune system that are involved in protecting the body against both infectious disease and foreign invaders.

6. The thickening and hardening of the walls of the arteries, occurring typically in old age.

7. Used to look at the arteries or veins in the head, arms, legs, chest, back, or belly.

9. A rarely used term for bleeding from a bronchus or bronchi; it is replaced by pulmonary haemorrhage in the working medical parlance.
