

Middle School Science (you should know)

Across

3. When both traits from both parents of a organisms gene are the same
4. The part of the experiment that responds to the change
8. The cell organelle that makes energy
9. The gene, or trait, that is stronger and masks the weaker gene
10. The variable that is changed in an experiment

Down

1. A relationship between two organisms where one benefits and other isn't affected
2. A tool used in genetics to determine combinations of genes
5. The second phase in Mitosis where the chromatids are pulled away
6. Where the DNA is store in a cell
7. A scientific theory thay species change over time
