Midterm Exam

Across

- **3.** Lines in a plane that do not
- **6.** A point where two or more edges meet
- 10. Triangle equals 90 degrees
- 12. The longest side of a right triangle
- 13. A line with a single end point
- **14.** A plane figure with four straight sides and four right angles
- 16. A line from the center of a circle to the circumference

- **18.** Two lines that meet at a right angle
- 19. A parallelogram opposite acute angles and four equal sides
- **20.** The distance around a circle Down
- 1. A quadrilateral with two pairs of parallel sides
- 2. Triangle that is equal on all sides
- 4. The angle between any side of a shape
- **5.** A triangle whose angles are less than 90 degrees

- 7. Two angles that have a common vertex and side
- **8.** A line that passes through two lines in the same plane at two points
- **9.** A polygon with three edges and three vertices
- 11. A quadrilateral with one pair of parallel sides
- **15.** Two figures that are the same shape and size
- **17.** A straight line that passes through the middle of a circle
