

Name That Organelle

Across

2. gives support and shape to cell
4. makes lipids (fats) and packages proteins for delivery out of the cell
8. stores water, waste, and other substances
9. rewrites RNA (RNA) and combine it with proteins. This results in the formation of incomplete ribosomes

10. cellular liquid in which organelles are suspended

11. breaks down food molecules and releases energy

12. changes, packages, and transports materials out of the cell

Down

1. make proteins
3. makes food by photosynthesis in a plant cell

5. digests food particles, waste, and foreign invaders (viruses, bacteria)

6. controls cell activities

7. boundary that provides limited support to the cell and controls movement of materials in and out of the cell
