

Name: _____

Natural Resources Crossword Puzzle

Across

- 3. Energy as solar, wind, or nuclear energy that can replace traditional fossil fuel sources, such as coal, oil, and natural gas.
- 5. Inexhaustible energy resource that used hot magma or hot, dry rocks from below Earth's surface to generate electricity.
- 9. Careful use of resources to reduce damage to the environment though such methods as composting and recycling materials.
- 10. Fossil fuel formed from marine organisms that is often found in tilted or folded rock layers and is used for cooking and heating.

- 11. Nonrenewable energy resource, such as oil and coal, formed over millions of years from the remains of dead plants and other organisms.
- 12. Alternative energy source that is based on atomic fission.
- 13. Energy from the Sun that is clean, inexhaustible, and can be transformed into electricity by solar cells.
- 14. A natural resource that cannot be replaced or that can be replaced only over thousands or millions of years.

Down

- 1. A resource that remains in constant supply and will not run out.

- 2. Any material made naturally that is used by humans or living things.
- 4. Electricity produced by water-power using large dams in a river.
- 6. A natural resource that can be used and replaced over a relatively short time.
- 7. Renewable energy derived from burning organic materials such as wood and alcohol.
- 8. Conservation method in which old materials are processed to make new ones.
