

# Natural Selection

## Across

- 3. Changes in an organism that allow it to thrive and survive
- 4. Remains of past organisms
- 6. Any difference in organisms of the same species
- 10. The formation of a new species through evolution
- 11. A species that is flourishing and surviving

12. Species of mammal with long lower legs and who walk on two legs with no tail

14. Method of measuring age in years

15. Method of measuring age in relation to other events or objects

16. Species of Hominids that includes modern humans

## Down

1. The one super continent surrounded by oceans from the Earth's past.

2. Gaps in the fossil record that help prove evolution exists

5. Creator of the Theory of Evolution by Natural Selection

7. The change in species over time

8. Mammals with binocular vision and opposing thumbs

9. An entire species that no longer exists

13. A change in the DNA of an organism
