# Neck and Face muscles

- |  |                        |
|--|------------------------|
| 1. Attaches from the transverse process of the cervical spine to the first rib   | A. Buccinator          |
| 2. flexes and laterally flexes the neck at the spinal joints   | B. longus capitis      |
| 3. Manubrium of the sternum and clavicular head: Medial clavicle to the mastoid process of the temporal bone   | C. orbicularis oris    |
| 4. Flexes the lower neck, extends the upper neck, laterally flexes the neck, and contralaterally rotates the neck and head at the spinal joints                                | D. Sternocleidomastoid |
| 5. Transverse process of the cervical spine to the second rib  | E. Platysma            |
| 6. Laterally flexes the neck at the spinal joints  | F. Splenius Cervicis   |
| 7. transverse process of cervical spine to the first rib   | G. Longus Colli        |
| 8. flexes and laterally flexes neck at spinal joints   | H. middle scalene      |
| 9. transverse process of the cervical spine to the occiput   | I. Occipitofrontalis   |
| 10. flexes head and neck at the spinal joints  | J. Sternocleidomastoid |
| 11. entire muscle: transverse process and anterior bodies of C3-T3 vertebrae to the entire muscle: transverse process and anterior bodies of C2-C6 and the anterior arch of C1 | K. Orbicularis Oculi   |
| 12. Flexes neck at spinal joints   | L. Occipitofrontalis   |
| 13. spinous processes of T3-T6 to the Transverse Processes of C1-C3  | M. splenius capitis    |
| 14. Extends the neck, Laterally flexes the neck, ipsilaterally rotates the neck at the spinal joints   | N. Buccinator          |
| 15. Nuchal ligament from C3-C6 and the spinous processes of C7-T4 to the Mastoid Process of the temporal bone and the occipital bone   | O. orbicularis oris    |
| 16. Extends the head and neck, Laterally Flexes the head and neck, and ipsilaterally rotates the head and neck at the spinal joints  | P. Orbicularis Oculi   |
| 17. Occipitals: Occipital Bone and the temporal bone to the galea Aponeurotica Frontalis: Galea Aponeurotica to the Fascia and skin overlying the frontal Bone                 | Q. longus capitis      |
| 18. Draws the scalp Posteriorly (elevation of the eyebrows)  | R. Splenius Cervicis   |

19. Medial side of the eye to the medial side of the eye (returns to the same attachment encircling the eye)	S. Longus Colli
20. Closes and squints the eye (orbital part)	T. Splenius Capitis
21. Maxilla and the mandible to the lips	U. Anterior Scalene
22. Compresses the cheek against the teeth	V. Posterior Scalene
23. Orbicularis oris is a muscle that, in its entirety, surrounds the mouth	W. middle scalene
24. closes the mouth and protracts the lips	X. Anterior Scalene
25. subcutaneous fascia of the superior chest to the mandible and the subcutaneous fascia of the lower face	Y. Platysma
26. draws up the skin of the superior chest and neck, creating ridges of skin of the neck	Z. Posterior scalene
