

# Nero Somatic Diease

## Across

- 2.** abnormal electrical activity that occurs in one or more parts of the brain hemisphere; partial seizure  
**3.** unilateral (one-sided) paralysis of the nerves that control the facial muscle  
**10.** paralysis of one side of the body  
**11.** diffuse pain (that is, pain that is spread out) in one or more parts of the head  
**13.** tumor of the neuroglial (glial) tissue.  
**15.** A traumatic brain injury resulting from a blow to the head or violent shaking of the head and upper body  
**16.** a subjective sensation that often occurs before a migraine or seizure  
**17.** a Temporary loss of consciousness due to inadequate blood flow to the brain

- 18.** a rare but serious condition that results in acute encephalopathy (brain malfunction) and hepatomegaly (liver enlargement); typically seen in children under 18 years of age after a viral infection  
**19.** progressive disorder of the nervous system marked by signs such as tremor  
**20.** an epileptic seizure characterized by violent muscle contractions and loss of consciousness; tonic-clonic seizure.

## Down

- 1.** sensation of numbness, pickling, or tingling, usually in upper or lower extremities  
**4.** lack of awareness of oneself and the inability to respond to environmental stimuli due to injury, shock, or oxygen deprivation

- 5.** abnormal, localized (limited to one area) dilation of blood vessel in the cerebrum  
**6.** any intracranial mass, which may be neoplaic ( a growth), cystic (a sac containing fluid), or inflammatory (an abscess)  
**7.** temporary or permanent loss of voluntary movement (motor function)  
**8.** A condition of progressive mental deterioration caused by organic brain disease  
**9.** an involuntary, repetitive trembling of the body or limbs  
**12.** inflammation of the gray matter of spinal cord; caused by a highly contagious virus  
**14.** split spine
