

## Networks - Factors that affect the performance of a network

### Across

3. When data is corrupted what has to happen?

5. What type of connection does interference effect?

11. What does 'Mbps' mean?

12. True Or False? If a device fails the likelihood of congestion is greater.

13. What physical factor limits/interrupts a wireless connection?

14. So much network traffic that the network devices are struggling to forward it all.

### Down

1. What is the term that defines ' a measure of how quickly and how correctly data travels across a network'

2. Something is preventing sent data staying intact until it reaches its destination

4. The amount of data moving across a network at a given point of time.

6. What vector factor limit/interrupts a wireless connection?

7. Is a measure of how much data can travel across it in a certain amount of time.

8. Can interference corrupt data? True or False

9. What is bandwidth measured in?

10. Is made up of all of the devices connected to it.
