

# Neurones

## Across

2. -70mv, is known as the ..... potential  
 7. Highly myelinated neurones  
 9. Sodium potassium ..... pump  
 10. Sodium ions flood in causing  
 12. Less myelinated neurones

13. Only found in sensory and bipolar neurones

## Down

1. Voltage-gated sodium channels close, potassium gates open causing  
 3. The potential has fallen below the -70mv...  
 4. Branches found on the cell body of a motor neurone, connecting to previous cells

5. Name of an impulse action...  
 6. Muscles or glands can be these  
 8. Neurones involved in a reflex, found in spinal cord  
 11. Many neurone fibres bundled together
