

Name: _____ Date: _____

Neuroscience Review

Across

2. Neuromodulators are released into ____ fluid
4. Fight or flight response is due to the _____ nervous system
9. Cranial nerve for taste sensation on anterior 2/3 of tongue
10. Presynaptic ____ is when more neurotransmitter is released
11. The ____ terminal is where neurotransmitters are stored

14. Going from PNS to CNS
15. From the soma toward the presynaptic terminal
17. Stage lasting from day 15 to the 8th week
18. Most common cell in the nervous system
19. The ____ and spinal cord are formed from the neural tube
Down
1. Star-shaped macroglial cell that is only found in the CNS
3. Presynaptic terminal that communicates with the soma

5. Lateral part of the somite becomes the
6. Sheath made up of proteins and fat
7. Receptor that responds to pressure and stretch
8. The ____ neuron connects the ganglion to the effector organ
12. Area responsible for respiration
13. What layer are somites found in?
16. This forms from day 18-26
