

Non Mendelian Genetics

Across

1. Bell shaped curve that represents the distribution of values
4. Relating to or determine by polygenes
8. Substance whose presence is essential for the activity of an enzyme
10. A thread like structure of nucleic acid and protein
12. Number of occurrences of a periodic or recurrent process

13. form of heterozygous dominance

14. Inheritance pattern that involves two more than just the typical alleles that usually code for a certain characteristics in a species

Down

2. Form of intermediate inheritance

3. Process of sexual reproduction

5. Form of inheritance where in alleles of a Gene pair in heterozygote are fully aware of the expressed

6. Production by a single Gene of two or more apparently unrelated effects

7. Interaction of genes that are not alleles

9. Controlled by a Gene or an allele located on the sex chromosome

11. Offspring of different species
