

Ocean Floor Features

Across

- 3.** Where transform faults intersect with diverging plate boundaries.
- 5.** A volcano that has formed from magma close to the crust.
- 8.** Continuous mountain range across the ocean floor.
- 9.** The line where the shelf and slope meet

11. Margin that has a lot of earthquake activity

12. Volcanic peaks underwater.

13. Linear or circular reef separated by a lagoon from a landmass.

14. Deep parts of the ocean made by subducting plates.

Down

1. A reef that forms at the margin of a landmass

2. A seaward extension of continents.

4. Large canyons cut into the slope

6. A margin that has little or no earthquake activity.

7. Current of sediment filled with water

10. Begins at the shoreline and ends at the slope
