

# October Vocab Project

**Across**

- 2. The amount of biologically productive land and sea available to us
- 4. A fossil fuel that is formed underground from partially decomposed plant material
- 5. The act of extracting ores, coal and other resources from Earth
- 7. Release of harmful materials or gases into the environment and atmosphere
- 8. A structure that is built across a river to control its flow

9. The pumping of water at high pressure in order to break apart rocks, this process releases natural gas.

10. The removal of trees faster than forests can regenerate themselves

**Down**

- 1. Absorbs Sun rays and converts them to electricity or heat
- 3. A community or system of organisms that interact with their environment
- 6. A machine that converts mechanical energy into electrical energy
