

# Organic Chemistry

## Across

7. one of the more complex carbohydrate: long molecules of monosaccharides
8. many sugars that are linked together
9. made mostly of hydrocarbon and stores energy
10. a giant molecule made up of 100's or 1000's of smaller units called monomers
11. simple carbohydrates that are not decomposable to simpler sugars

## Down

1. carbohydrates are known as
2. trace elements that are only needed in small amounts
3. made of nucleotides: has a sugar, phosphate, and nitrogen base
4. large polymers are formed by
5. the study of all compounds containing this element
6. any class of sugar that comes from a combo of two monosaccharides
