

Oxygenation/Perfusion

Across

1. Blood that pools
 4. Results from acute blood loss or vitamin deficiency
 6. Anti-coagulant used to prevent emboli
 9. Pain med of choice given during a myocardial infarction
 12. Arteries that get first dibs on blood

14. Pneumonia seen in older adults
 15. Their action is reduced in COPD
 16. pH less than 7.35
 17. pH greater than 7.45
Down
 2. Complication of immobility
 3. Procedure to restore perfusion
 5. Leads to confusion

7. Type of stroke treated with TPA
 8. Seen when there is reduced perfusion
 10. Result of reduced cardiac output
 11. Anti-platelet prescribed after stent placement
 13. Risk factor for Stroke and PVD
