PALS Review

Across

1. A type of crystalloid fluid for hypovolemic shock (two words)
2. Stage of shock where systolic BP is normal but has a decrease LOC
4. HR at which CPR is started on an 8 month old
7. The first drug used for bradycardia
8. Needle decompression for pneumothorax above this rib
9. Equipment needed after a witnessed sudden collapse (initials)
12. Important patient information needed to determine cause of shock

13. This is seen in the chest when using proper bagging technique
 14. If you stop to suction a patient, remember to restart this delivery when done
 15. A scan used to guide management after a head injury (initials)
 17. Cardiovert these patients in SVT with no IV access
 20. The E in the DOPE mnemonic
 21. Don't give this fluid when bolusing a patient
- Down**
3. Patients with this type of breath sounds should be kept calm

5. Sounds heard with lower airway obstruction
6. For proper technique when doing CPR, you must observe this... (two words)
10. Joules per KG used for second shock during V-fib
11. When this is decreased on one side, suspect a pneumo (two words)
16. V-fib is a potentially lethal rhythm that can cause the -----not to pump
18. A type of Shock
19. Equipment used in respiratory failure (initials)
