

PARALLEL LINES By: Janea' Clark

Across

5. Angles in the same place at the intersection of the transversal

8. The angles opposite each other when two lines cross.

10. A shape, formed by two lines or rays diverging from a common point (the vertex).

11. When two lines are crossed by another line (Transversal), the pair of angles on opposite sides of the transversal, but inside the lines are called

12. When two lines are crossed by another line (Transversal), the pair of angles on opposite sides of the transversal, but outside the lines are called

Down

1. Angles on the same side in the interior of the two parallel lines are called

2. When two lines are crossed by another line (transversal), the pairs of angles on one side of the line, but inside the lines are called

3. When two angles are crossed by another line (Transversal), the angles in matching corners are called

4. Angles that share a common ray and vertex.

6. Either of two angles whose sum is 180° .

7. Two adjacent, supplementary angles formed by two intersecting lines

9. A point where two or more straight lines meet. (A Corner)
