# PAT Vocabulary Practice

## Across

4. For both addition and multiplication expressions the order of the numbers does not affect the sum eg.  $3+4=4+3$  and  $3*4=4*3$
6. In a table the vertical values
9. In a table the horizontal values
11. An Expression is a mathematical phrase that combines numbers and/or variables using mathematical operations.
12. Start at a number, then count on by that number

13. An equation says that two things are equal. It will have an equals sign "=" like this:

## Down

1. The Coefficient of a term in an expression is the number which is multiplied by one or more variables or powers of variables in the term
2. A comparison of 2 quantities measured with the same unit
3. When one side of an equation is changed, the other side must be changed the SAME way

5. a fraction having the numerator greater than the denominator

7. a number consisting of a whole number and a fraction or decimal, as  $4\frac{1}{2}$  or 4.5

8. Variables are (usually) letters or other symbols that represent unknown numbers or values.

10. A whole number with exactly two factors, 1 and itself, eg: 7, 13, 19 and 23
