# PPE/Infection Prevention

## Across

5. Procedures are being performed by allied dental personnel  
7. Reduces pathogens on a surface to a safe level  
8. Agent used to destroy pathogenic  
12. Droplets of microorganisms in saliva  
13. Center for Disease Control is to protect health and promote quality of life  
14. Dentist personally authorizes the procedure and before dismissal of patient  
16. Uses steam under pressure/gas to sterilize equipment and supplies.  
17. White fluid from plants used for making rubber  
18. Condition of displaying, revealing, or exhibiting

20. Presence of unwanted microorganisms on surfaces  
22. Intensity of disease produced by pathogens  
24. What is wore over the nose and mouth to protect from inhaling infectious organisms spread by the aerosol spray?  
25. What is the most critical PPE and must wear a new pair for each patient and remove after use?  
26. Sharp edges/points that can puncture/cut skin  
27. Microorganisms of viruses that are carried in blood

## Down

1. Practiced in healthcare facilities to prevent and control the spread of disease  
2. Protective covering  
3. What does PPE stand for?

4. Infection prevention practices that apply to healthcare  
6. Method to test the sterilizer

9. High risk of infection if contamination take place  
10. What is wore as alternative to protective eye-wear when splashing of blood or other body fluids?  
11. Scaling instruments to remove tartar  
15. What is worn to protect eyes against the danger of eye damage?  
19. Process of destroying all forms of microbial life  
21. Occupational Safety and Health Administration  
23. Defense mechanisms providing resistance to invading pathogens
