

Name: _____

Date: _____

Photosynthesis Vocab

Across

4. A compound used to store and release energy in cells

6. The second stage of cellular respiration

8. Process that releases energy by breaking down glucose + other food molecules in the presence of Oxygen

9. A set of reactions in photosynthesis that do not require light.

12. No Oxygen required for this process

13. First set of reactions in cellular respiration

Down

1. A set of reactions in photosynthesis that uses energy from light

2. Oxygen is needed for this process

3. An organelle that captures energy from sunlight and turns it into chemical energy

5. A way to make food from H₂O and CO₂

7. Cells release energy in the absence of Oxygen

10. Its only used by plants to gather sunlight

11. A molecule that absorbs light (energy from Sun)
