

# Photosynthesis & Cellular Respiration

**Across**

- 2. Cells absorb this during cellular respiration
- 4. Where photosynthesis takes place
- 7. Organisms that can't make their own food
- 8. Organisms that eat both plants and animals
- 9. This molecule is rich in energy

- 10. An organism able to make its own food

**Down**

- 1. The process in which cell make ATP
- 3. Where cellular respiration takes place
- 5. Energy used by the/a cell
- 6. What are turtles, humans, elephants, and tigers are examples of

**Word Bank**

- |             |                      |              |              |
|-------------|----------------------|--------------|--------------|
| Omnivore    | Cellular Respiration | Consumers    | Autotroph    |
| Chloroplast | oxygen               | Mitochondria | Heterotrophs |
| ATP         | Carbohydrates        |              |              |
