

Plate Tectonics

Across

- 5. A volcano that slowly oozes lava. It has a gentle slope.
- 6. A single landmass that existed from 200 million to 350 million years ago.
- 7. Chunks of the lithosphere
- 8. A type of volcano that has fast-flowing lava and creates steep slopes.

- 10. Times of thousands, millions, and billions of years referred to by geologists.

Down

- 1. A name for the mantle and crust.
- 2. How many main tectonic plates are there?
- 3. A vent to the earth's interior.
- 4. Molten rock on the surface of the earth.
- 9. Molten rock under the earth's surface.
