## Plate Tectonics Crossword Puzzle

## Across

- 2. the com-positional layer of Earth between the crust and the outer core
- **3.** at the center of the Earth; made up of two parts, inner and outer
- **5.** the hypothesis that today's continents were once part of a single landmass
- **8.** a large super-continent that existed millions of years ago
- 11. a break of rock in Earth's surface
- 12. boundary caused by two tectonic plates moving in opposite directions and scraping against each other
- **16.** boundary caused by two tectonic plates moving apart
- 17. the bending and breaking of rock due to stress

- 20. stress that squeezes rock until it folds or breaks
- 23. a current caused by the rising of heated fluid and sinking of cooled fluid; this is the engine that causes the tectonic plates to move

## Down

- 1. large, moving pieces of the lithosphere
- **4.** a change in the magnetic poles resulting in a pattern that provides evidence for seafloor spreading and plate tectonics
- **6.** The process that creates new sea floor as plates move away from each other at the mid-ocean ridges. As new seafloor rock forms, it pushes the older rock in opposite directions away from the ridge.
- 7. a theory that Earth's is divided into huge moving slabs
- **9.** the soft layer of the mantle on which tectonic plates move

- **10.** boundary caused by two tectonic plates coming together
- **13.** consists of the upper mantle and crust; rigid layer of Earth
- **14.** Energy released by earthquakes that travel through rocks outward
- 15. when land is bent in result of deformation
- 18. the lower, more dense part of the mantle
- **19.** stress that stretches rock in the middle until it becomes thinner and eventually breaks
- **21.** one tectonic plate is pulled beneath another
- **22.** the outermost compositional layer of earth; a rigid layer
